OSTEOGENICS BIOMEDICAL

vitala®
porcine pericardium collagen membrane

Natural

Manufactured using a proprietary protocol designed to maintain the natural, microporous, 3-layered architecture of the tissue without the need for cross-linking chemicals and agents.

1000x magnification

Durable

Designed to resist tearing during placement, Vitala® is naturally strong.

Excellent tensile strength

Adaptable

The natural collagen structure provides a unique combination of supple handling and ideal defect adaptability. Because both sides are smooth, either side may be placed against the defect.

Supple and flexible

- Substantially resorbed within 26 weeks

Available Sizes

15 mm x 20 mm	*Part No. VIT1520*
13 mm x 25 mm	*Part No. VIT1325*
20 mm x 30 mm	*Part No. VIT2030*
30 mm x 40 mm	*Part No. VIT3040*
